Application No.: 07-158437 [JP 95158437]

Filed: June 01, 1995 (19950601)

ABSTRACT

PURPOSE: To provide a highly portable and safe razor without deteriorating usability by having operating means for switching and moving a slider between a storing position where both heads are housed from the openings and a use position where any one of heads is projected from the opening.

CONSTITUTION: When this razor is not used, an operation knob 11 is engaged with and held by an engagement part 14 in the center and right and left heads 5, 6 are housed from openings 2, 3 of a holder 1. The heads 5, 6 are covered by the holder 1 to secure safety. On the other hand, when the razor is used for projecting parts of the body such as arms or legs, the operation knob 11 is pushed in against energizing force of a spring and the main body is pulled out from the engagement part 14. After that, the operation knob 11 is moved while being pushed to the left side until the engagement part 14 on the left end and is released. The head 5 in which a blade 7 is curvedly inserted in a recessed part is projected from the opening 2 and the other head 6 is housed in the holder 1.
